Professional Profile

Full-stack software engineer combining Node.js and TypeScript product engineering with controlled AI systems. Builds authenticated Gemini tools, document-grounded retrieval, realtime services, relational data workflows, usage accounting, and optimization services across Next.js, NestJS, Python, and production security boundaries.

Education

MSc Cyber Security and Forensics

IIT Sri Lanka / University of Westminster, UK
2026 - Present

BSc (Hons) in Software Engineering

University of Plymouth, UK
2022 - 2025

IT Foundation Programme

NSBM Green University, Sri Lanka
2020 - 2021

Skills

Node.js & TypeScript

- TypeScript
- Node.js / Express
- NestJS
- Next.js / React
- REST APIs
- Socket.IO / WebRTC
- Runtime validation

Data & Security

- PostgreSQL / MySQL
- MongoDB / Redis
- Entra ID / Auth.js
- JWT / RBAC
- Rate limiting
- HMAC / origin controls
- Audit state

AI & Optimization

- Gemini function calling
- RAG / File Search
- OR-Tools CP-SAT
- Tool policy controls
- Usage / cost accounting
- Retention controls

Delivery

- Docker / Compose
- GitHub Actions
- Linux
- Apache / Nginx
- PM2
- Testing
- Observability

Experience

NSBM University - Associate Software Engineer 2025 - Present

- Build typed university workflows and controlled AI tools with session-owned identity, authorization gates, validation, and usage accounting.
- Design service and data boundaries for retrieval, realtime interactions, migrations, retention, optimization, and production operations.

Iplay Global - UI Developer Intern 2022 - 2023

- Implemented responsive interfaces and integrated frontend workflows with REST APIs.

Infigo Developers - Developer 2020 - 2022

- Delivered client websites and developed practical React and Angular foundations in a startup team.

Highlighted Projects

GreenMate AI - Next.js, TypeScript, Gemini, MySQL

- Implemented authenticated Gemini function tools where student identity comes from the server session, never model arguments.
- Added global/per-tool controls, sanitization, rate limiting, usage accounting, and retention-aware history.

NSBM RAG Bot - Gemini File Search, PHP, MySQL

- Built document-grounded retrieval, an embeddable responsive client, and administrative dataset/session tooling.
- Applied HMAC signing, origin allowlisting, database rate limits, sanitization, and usage reporting.

Timetable Generator Gen2 - Next.js, FastAPI, OR-Tools

- Connected authenticated TypeScript workflows to private CP-SAT compute for full-semester allocation constraints.
- Kept source-system access read-only and isolated optimization writes behind a shared-secret service boundary.

Doc-Assist Pro - Node, Express, PostgreSQL

- Built as a team across a Node API, React Native patient and doctor clients, and Angular administration.
- Connected appointment, record, prescription, and doctor-recommendation workflows through one backend.
