Professional Profile

Full-stack software engineer building typed web platforms and backend workflows with Node.js, TypeScript, React, Next.js, NestJS, and relational databases. Experienced with authenticated AI tools, realtime communication, API boundaries, migrations, Docker delivery, and operational usage signals.

Education

MSc Cyber Security and Forensics

IIT Sri Lanka / University of Westminster, UK
2026 - Present

BSc (Hons) in Software Engineering

University of Plymouth, UK
2022 - 2025

IT Foundation Programme

NSBM Green University, Sri Lanka
2020 - 2021

Skills

Node.js & TypeScript

- TypeScript
- Node.js / Express
- NestJS
- Next.js / React
- REST APIs
- Socket.IO / WebRTC
- Runtime validation
- Unit / API tests

Data & Security

- PostgreSQL / MySQL
- MongoDB / Redis
- SQL / indexing
- Migrations
- Entra ID / Auth.js
- JWT / RBAC
- Validation / audit trails

Product UI

- Angular
- Flutter
- Responsive UI
- Accessibility
- State workflows
- API integration

Delivery

- Docker / Compose
- GitHub Actions
- Linux
- AWS
- Apache / Nginx
- PM2
- Sentry / observability

Experience

NSBM University - Associate Software Engineer 2025 - Present

- Build Next.js and TypeScript university workflows plus authenticated Gemini tools with server-owned identity and policy gates.
- Operate MySQL-backed services with migrations, rate limits, usage accounting, audit state, and retention-aware chat history.

Iplay Global - UI Developer Intern 2022 - 2023

- Implemented responsive interfaces and integrated frontend workflows with REST APIs.

Infigo Developers - Developer 2020 - 2022

- Delivered client websites and developed practical React and Angular foundations in a startup team.

Highlighted Projects

GreenMate AI - Next.js, TypeScript, Gemini, MySQL

- Implemented an authenticated function-call loop where student identity is derived from the session, never model arguments.
- Added global/per-tool controls, rate limiting, sanitization, usage accounting, and session-owned history.

InfluenceLK - NestJS, Next.js, PostgreSQL

- Built modular marketplace foundations with runtime white-label settings and escrow/wallet ledger states.
- Implemented Socket.IO chat, typing/read/presence events, and WebRTC perfect negotiation for peer calls.

Doc-Assist Pro - Node, Express, PostgreSQL

- Built as a team across a Node API, React Native patient and doctor clients, and Angular administration.
- Connected appointment, record, prescription, and doctor-recommendation workflows through one backend.

LiteraNet - Node, Angular, MongoDB, Socket.IO

- Built as a team: catalogue, loan, reservation, branch, dashboard, and realtime-notification workflows.
- Packaged with Docker Compose and maintained k6 load-test assets for the API surface.
